Automatic Control

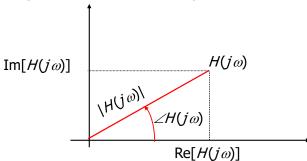

Frequency response tools for analysis and design of feedback control systems

- Part I: Bode diagrams resume

Automatic Control – M. Canale

Frequency response function

The function $H(j\omega): \mathbb{R}^+ \to \mathbb{C}$ of the variable $\omega \in \mathbb{R}^+$ is called **frequency response funtion** of the system:

$$H(j\omega) = \text{Re}[H(j\omega)] + j \, \text{Im}[H(j\omega)] \rightarrow \text{ Cartesian representation}$$

$$H(j\omega) = |H(j\omega)| e^{j \angle H(j\omega)} \rightarrow \text{ Polar representation}$$

Frequency response graphical representations

Automatic Control – M. Canale

Graphical representations of the frequency response

The **frequency response function** of a dynamic system can be graphically represented through:

Bode diagrams \rightarrow representation of $|H(j\omega)|$ and $\angle H(j\omega)$ in function of $\omega \in \mathbb{R}^+$

Polar diagram \rightarrow representation of Im[$H(j\omega)$] vs. Re[$H(j\omega)$] parameterized in $\omega \in \mathbb{R}^+$

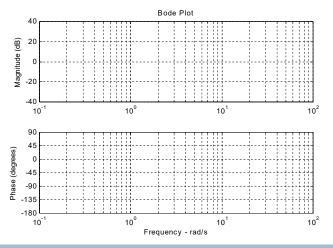

Nichols diagram \rightarrow representation of $|H(j\omega)|$ vs. $\angle H(j\omega)$ parameterized in $\omega \in \mathbb{R}^+$

Bode plots: resume

Automatic Control – M. Canale

Bode plots

Bode plots \rightarrow representation of $|H(j\omega)|$ and $\angle H(j\omega)$ in function of $\omega \in \mathbb{R}^+$

Graphical representations: Bode plots

Bode plots \rightarrow plots of $|H(j\omega)|$ and $\angle H(j\omega)$ in function of $\omega \in \mathbb{R}^+$

- Magnitude Bode diagram $\rightarrow |H(j\omega)|$ in function of ω
 - $|H(j\omega)|$ expressed in dB $|H(j\omega)|_{dB} = 20 \log_{10} |H(j\omega)|$, linear scale
 - ullet ω expressed in rad/s , logarithmic scale
- Phase Bode diagram $\rightarrow \angle H(j\omega)$ in function of ω
 - $\angle H(j\omega)$ expressed in degrees (°) (or in rad), linear scale
 - ullet ω expressed in rad/s , logarithmic scale

Automatic Control – M. Canale

AC L08 6

The dc-gain form of system transfer function

$$H(s) = K \frac{(1 - s/z_1)(1 - s/z_2)\cdots(1 - s/z_m)}{s'(1 - s/p_1)(1 - s/p_2)\cdots(1 - s/p_{n-r})}$$

- $z_1, \dots, z_m \rightarrow \text{zeros of } H(s)$
- $r \rightarrow$ poles of H(s) at the origin
- $p_1, \dots, p_{n-r} \rightarrow \text{ poles of } H(s)$
- $K \rightarrow \text{generalized dc-gain} \rightarrow K = \lim_{s \rightarrow 0} s' H(s)$

Example:
$$H(s) = \frac{s+5}{s^2+3s+2} = \frac{5(1+s/5)}{1\cdot(1+s)\cdot 2\cdot(1+s/2)} = \frac{5}{2}\frac{1+s/5}{(1+s)(1+s/2)}$$

No specific MatLab statement

Bode plots

Consider the dc-gain form of H(s)

$$H(s) = K \frac{(1-s/z_1)(1-s/z_2)\cdots(1-s/z_m)}{s^r(1-s/p_1)(1-s/p_2)\cdots(1-s/p_{n-r})}$$

$$\to K = \lim_{s\to 0} s^r H(s) \text{ generalized dc-gain}$$

$$\to \begin{cases} \text{zeros in } s = z_i \\ \text{poles in } s = p_i \end{cases}$$

$$\begin{cases} r=0 \rightarrow \text{ no singularities at } s=0 \\ r>0 \rightarrow \text{ poles at } s=0 \end{cases}$$

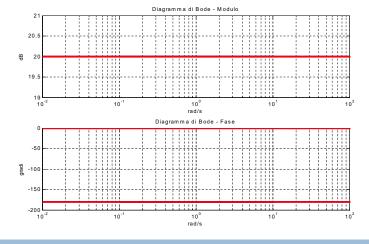

$$\begin{cases} r>0 \rightarrow \text{ poles at } s=0 \\ r<0 \rightarrow \text{ zeros at } s=0 \rightarrow \kappa \frac{s^r \left(1-s/z_1\right) \left(1-s/z_2\right) \cdots \left(1-s/z_{m-r}\right)}{\left(1-s/\rho_1\right) \left(1-s/\rho_2\right) \cdots \left(1-s/\rho_n\right)} \end{cases}$$

Automatic Control – M. Canale

AC L08 9

Bode plots computation

Costant gain $H(j\omega) = K$

Bode plots computation

$$H(s) = 10 \frac{1 + s/2}{s(1 + s + s^2)}$$
Frequency response:
$$H(j\omega) = 10 \frac{\frac{H_1(j\omega)}{s(1 + j\omega/2)}}{\underbrace{\frac{j\omega}{H_2(j\omega)}(1 + j\omega - \omega^2)}_{H_3(j\omega)}} = H_0(j\omega) \frac{H_1(j\omega)}{H_2(j\omega)H_3(j\omega)}$$

$$\text{magnitude} \rightarrow \begin{cases} \left| H(j\omega) \right|_{\log} = \left| H_0(j\omega) \right|_{\log} + \left| H_1(j\omega) \right|_{\log} - \left| H_2(j\omega) \right|_{\log} - \left| H_3(j\omega) \right|_{\log} \\ \left| H(j\omega) \right|_{\log} = 20 \log_{10} \left(\left| H(j\omega) \right| \right) \quad dB \end{cases}$$

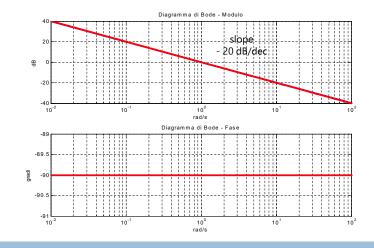

phase
$$\angle H(j\omega) = \angle H_0(j\omega) + \angle H_1(j\omega) - \angle H_2(j\omega) - \angle H_3(j\omega)$$

Automatic Control – M. Canale

AC L08 10

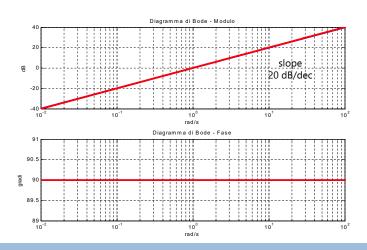

Bode plots computation

Pole at the origin
$$H(j\omega) = \frac{1}{j\omega}$$

Bode plots computation

Zero at the origin $H(j\omega) = j\omega$

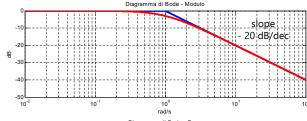

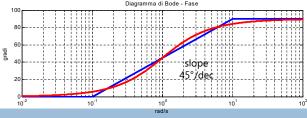

Automatic Control – M. Canale

AC_L08 13

Bode plots computation

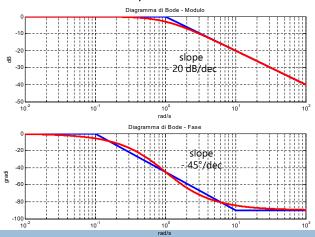

Real positive pole $H(j\omega) = \frac{1}{1 - j\frac{\omega}{\rho}} = \frac{1}{\sum_{\text{Example } \rho = +1}} \frac{1}{1 - j\omega}$

Bode plots computation

Real negative pole
$$H(j\omega) = \frac{1}{1 - j\frac{\omega}{\rho}} = \frac{1}{1 + j\omega}$$

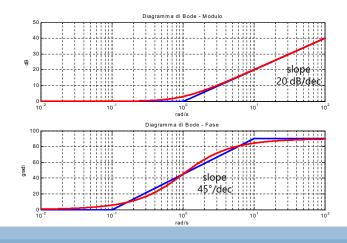

Automatic Control – M. Canale

AC_L08 14

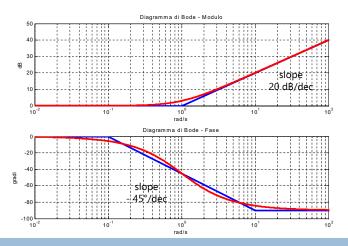

Bode plots computation

Real negative zero $H(j\omega) = 1 - j\frac{\omega}{Z} = 1 + j\omega$

Bode plots computation

Real positive zero
$$H(j\omega) = 1 - j\frac{\omega}{Z} = 1 - j\omega$$

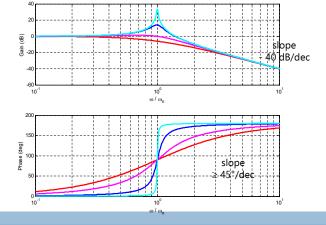

Automatic Control – M. Canale

AC L08 17

AC L08 19

Bode plots computation

Complex conjugate positive poles
$$H(s) = \frac{1}{1 + 2\frac{\zeta}{\omega_p}s + \frac{s^2}{\omega_p^2}} = = \frac{1}{1 + 2\frac{\zeta}{\omega_p}s + \frac{s^2}{\omega_p^2}} = \frac{1}{1 - s + s^2}$$

Bode plots computation

Complex conjugate negative poles
$$H(s) = \frac{1}{1 + 2\frac{\zeta}{\omega_n}s + \frac{s^2}{\omega_n^2}} = = \frac{1}{\sum_{\text{Example } \zeta = 0.5, \omega_n = 1}} \frac{1}{1 + s + s^2}$$

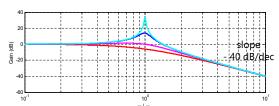

• For $0 < \zeta < 0.7$ we have a peak amplitude:

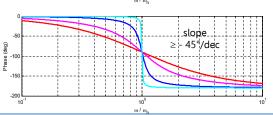

$$M_r = \frac{1}{2\zeta\sqrt{1-\zeta^2}}$$

at the frequency

$$\omega_r = \omega_n \sqrt{1 - 2\zeta^2}$$

$$\zeta = 0.01 \ 0.1 \ 0.5 \ 1$$

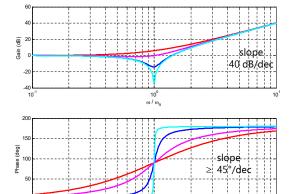

Automatic Control – M. Canale

AC_L08 18

Bode plots computation

Complex conjugate negative zeros
$$H(s) = 1 + 2\frac{\zeta}{\omega_n}s + \frac{s^2}{\omega_n^2} = 1 + s + s^2$$

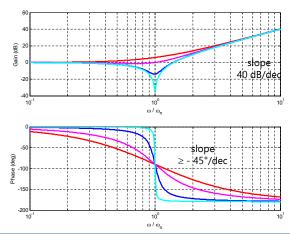

$$\zeta = 0.01 \quad 0.5 \quad 1$$
Example $\zeta = 0.5, \omega_n = 1$

Bode plots computation

Complex conjugate positive zeros
$$H(s) = 1 + 2\frac{\zeta}{\omega_n} s + \frac{s^2}{\omega_n^2} = 1 - s + s^2$$

$$\zeta = -0.01 - 0.1 - 0.5 - 1$$
Example $\zeta = -0.5, \omega_n = 1$

Automatic Control – M. Canale

AC_L08 21

Bode plots properties resume

$$H(s) = K \frac{(1 - s/z_1)(1 - s/z_2) \cdots (1 - s/z_m)}{s'(1 - s/\rho_1)(1 - s/\rho_2) \cdots (1 - s/\rho_{n-r})}$$

Magnitude and phase for $\omega \rightarrow \infty$

$$|H(j\infty)| = \begin{cases} -\infty|_{dB} = 0, n > m \\ K \frac{\prod_{i=1}^{m} 1/z_i}{\prod_{j=1}^{n-r} 1/p_j}, n = m \end{cases}$$

$$\angle H(j\infty) = (n_{\leq 0}^p + n_{>0}^z) \cdot (-90^\circ) + (n_{>0}^p + n_{\leq 0}^z) \cdot 90^\circ - \begin{cases} 180^\circ \text{ if } K < 0 \\ 0^\circ \text{ if } K \ge 0 \end{cases}$$

 $n_{\leq 0}^p = n^o$ poles with Re(.) ≤ 0 , $n_{>0}^z = n^o$ zeros with Re(.) > 0

 $n_{>0}^p = \text{n}^o$ poles with Re(.) > 0, $n_{<0}^z = \text{n}^o$ zeros with Re(.) ≤ 0

Bode plots properties resume

$$H(s) = K \frac{(1 - s/z_1)(1 - s/z_2) \cdots (1 - s/z_m)}{s'(1 - s/\rho_1)(1 - s/\rho_2) \cdots (1 - s/\rho_{n-r})}$$

Magnitude and phase for $\omega = 0^+$

$$|H(j0^+)| = \begin{cases} |H(j0)| = K, r = 0\\ \infty, r > 0 \to \text{ poles at } 0\\ 0, r < 0 \to \text{ zeros at } 0 \end{cases}$$

$$\angle H(j0^+) = r \cdot (-90^\circ) - \begin{cases} 180^\circ \text{ if } K < 0 \\ 0^\circ \text{ if } K \ge 0 \end{cases}$$

Automatic Control – M. Canale

AC L08 22

Bode plots properties resume

$$H(s) = K \frac{(1-s/z_1)(1-s/z_2)\cdots(1-s/z_m)}{s'(1-s/p_1)(1-s/p_2)\cdots(1-s/p_{n-r})}$$

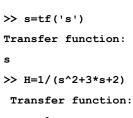

Magnitude and phase for 0<∞<∞: they depend on the interactions between the tf singularities and on their mutual locations

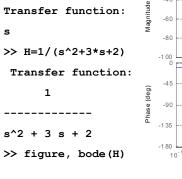

- each pole with negative, positive or null real part yields a magnitude slope decrease of -20 dB/dec
- each zero with negative, positive or null real part yields a magnitude slope increase of +20 dB/dec
- each pole with negative or null real part yields a phase lag of -90°
- each pole with positive real part yields a phase lead of +90°
- each zero with negative or null real part yields a phase lead of +90°
- each zero with positive real part yields a phase lag of -90°
